It was 11:25 p. m. when the accident oc-curred. The train was traveling at a high rate of speed and most of the passengers had already gone to sleep, while the few remaining awake were about to do so. There is a curve in the road about three miles west of Sullivan and when this miles west of Sullivan and when this curve was reached a sudden jolt and jar was felt all over the train. Everybody felt it and the people in the rear cars could hear the forward coaches rattling and rumbling over the ties and the crushing noises of cars being demolished. A creek is crossed by the road at that point and there is a steep embankment thirty feet high. Most of the passengers thought the train was going through a bridge and a feeling of horror chilled their blood.

In an instant all the coaches except the two sleeping cars had been thrown from the rails. People were thrown about in the cars in all directions and some of them were thrown from the coaches and down the embankment. Walter Davidson, who

the embankment. Walter Davidson, who travels for the Westinghouse Air Brake Company, was thrown right out of a win-dow on the opposite side of the coach from which he was sitting and sent rolling down the embankment to the edge of the creek. His feet were in the water.

The explanation given by the trainmen and passengers was that the spikes and fish-plates had been removed from the rail at the curve thus leaving the rail loose on the ties. The forward portion of the locomotive passed the place all right, but the tender jumped the track and was thrown part of the way down an embankment. It would probably have gone the en-tire distance had not the forward end held it up. Who removed the spikes and plates is not known, but the supposition is the work was done by train robbers who want-ed to hold up the train. Still no robbers
